Vulnerability Notification Service

**Keep Track of the
Latest Vulnerabilities
with Security Tracker!**

<http://www.securitytracker.com/>

SecurityTracker is a premier vulnerability notification service created to help you keep track of the latest vulnerabilities. We focus on rapid turnaround and 24 x 7 x 365 coverage to get you just the vulnerability information you need, when you need it—right away.

The **SecurityTracker** service is designed exclusively for information technology professionals. Whether you are a programmer, administrator, auditor, integrator, consultant, or manager, you will find **SecurityTracker** to be a strategic and essential productivity and risk management tool.

How It Works

At **SecurityTracker**, we spend our days and nights scouring the Internet for reports of vulnerabilities. All day. All night. Every day. Our automated agents scan web sites, e-mail lists, newsgroup feeds, white hat—gray hat—black hat information sources, vendor bulletins, and incident advisory sources for the absolute latest vulnerability information.

Then, we apply a series of proprietary analytical filters to reduce the massive amount of information we collect. We categorize the distilled data using a variety of narrowly defined topics to characterize the vulnerability as specifically as possible. Our expert security analysts review each relevant item and provide professionally edited remarks. The result is a clearly and cleanly organized **SecurityTracker Alert**.

In each **SecurityTracker Alert**, we identify the vendor and the affected target (the vulnerable entity). We indicate what type of target this is (e.g., operating system, device, application). To help you get just the level of information that you need, we describe the problem both in a brief summary and a more detailed description. We list the cause, impact, and solution.

“Simply stated, we aim to be the best source on the Internet for vulnerability information.”

Our goal is to help you extract just the information you are looking for, without requiring you to search through an excessive amount of often confusing information.

Because we are dedicated solely to reporting on security vulnerabilities—nothing else—we can provide the focus needed to meet your rigorous requirements.

- Rapid collection, analysis, and notification
- Granular customization—tailored to your environment
- Tracking for hardware, operating systems, applications, utilities, programming tools, etc.
- Clear, simple reports
- Superior service
- Expert analysis
- 24 x 7 x 365 coverage
- Robust and highly scalable infrastructure
- Secure browser-based setup with SSL encryption
- SMTP notification supports many standard devices
- Easy configuration—no complicated asset databases

- **Offers improved response times**— Keeping up-to-date with patches for security holes is challenging. Without rapid notification of new vulnerabilities, your network is at greater risk of attack or intrusion. We notify you rapidly so that serious problems can be fixed as soon as possible.
- **Saves time, effort, and money**— Your time is too valuable to spend scouring the Internet for accurate and recent vulnerability information. For far less money than it would cost you to hire a part-time security expert, we provide timely, easy-to-read notices with simple to follow directions.
- **Avoids information overload by only notifying of relevant problems**— You don't need to hassle with the multitude of vendor alert services. Don't be burdened with weeding out the numerous vulnerabilities that aren't applicable to the your systems; our notification reports are tailored to your unique environment.
- **Represents proactive due diligence**— Helps you demonstrate that you are actively taking appropriate steps to reduce risk.

How To Sign Up

For a pricing quote, or to subscribe to **SecurityTracker**, simply contact us. Our pricing structure varies based on the number of end-users within your organization that will be licensed to receive the SecurityTracker service. There is no setup fee and no annual contract required.

Whether you've got one user or one thousand or more, our systems can accommodate your needs. We can support individual users, entire departments, or multiple business units with flexible pricing.

When we set up your account, you will be able to select the technologies that you want to be alerted on in a customized profile. We will monitor for vulnerabilities in any type of product that you require. Just let us know!
